How to Recognize Multisystem Inflammatory Syndrome in Children (MIS-C)
A Delayed Immune Response Related to COVID-19

Children, adolescents, or young adults who develop certain symptoms after having COVID-19 might have MIS-C. They should see a doctor if they had COVID-19, or have been in close contact with someone who had COVID-19, within the past 6 weeks and now have the following:

---

Ongoing Fever

PLUS more than one of the following:

- Stomach Pain
- Diarrhea
- Vomiting
- Skin Rash
- Blood Shot Eyes
- Dizziness or Lightheadedness

Go to the nearest hospital Emergency Room if your child is showing any severe MIS-C warning signs such as:

- Trouble breathing
- Pain or pressure in the chest that does not go away
- Confusion or unusual behavior
- Severe abdominal pain
- Inability to wake or stay awake
- Pale, gray, or blue-colored skin, lips, or nail beds; depending on skin tone
