

Exploring the Foundations of Tribal Public Health Infrastructure

Nina Martin
Public Health Policy and Programs Manager
National Indian Health Board
2021 Tribal Public Health Summit
April 28, 2021

National Indian Health Board

Purpose: To advocate on behalf of all federally recognized American Indian and Alaska Native Tribes to ensure the fulfillment of the trust responsibility to deliver health and public health services as assured through treaties, and reaffirmed in legislation, executive orders and Supreme Court

Mission Statement: One Voice affirming and empowering American Indian and Alaska Native Peoples to protect and improve health and reduce health

Where are you joining from?

Session Objectives

- Describe components of Tribal public health infrastructure
- Describe key findings from the 2019 PHICCS survey and their relation to public health infrastructure
- Name components of Tribal public health infrastructure in your work

National Indian Health Board

INTRODUCING TRIBAL PUBLIC HEALTH
INFRASTRUCTURE

What is Public Health?

“Working Upstream”

Three sisters walked along a river bank and saw people in the river struggling to stay afloat. The first sister, distraught, jumped in and tried began pulling people out but there was too many. The second sister, resolute to save them, jumped in the river and tried to teach them to swim but there were too many. After looking at the scene, the third sister walked away. Confused, her sisters called out to her, “Where are you going?” She answered “I am going upstream to find out why people are in the in the river and to stop it.”

Health Care

VS.

Public Health

Public Health

The mission of public health is to
"fulfill society's interest in assuring conditions
in which people can be healthy."

(Institute of Medicine, The Future of Public Health. National Academy Press, Washington, DC, 1988)

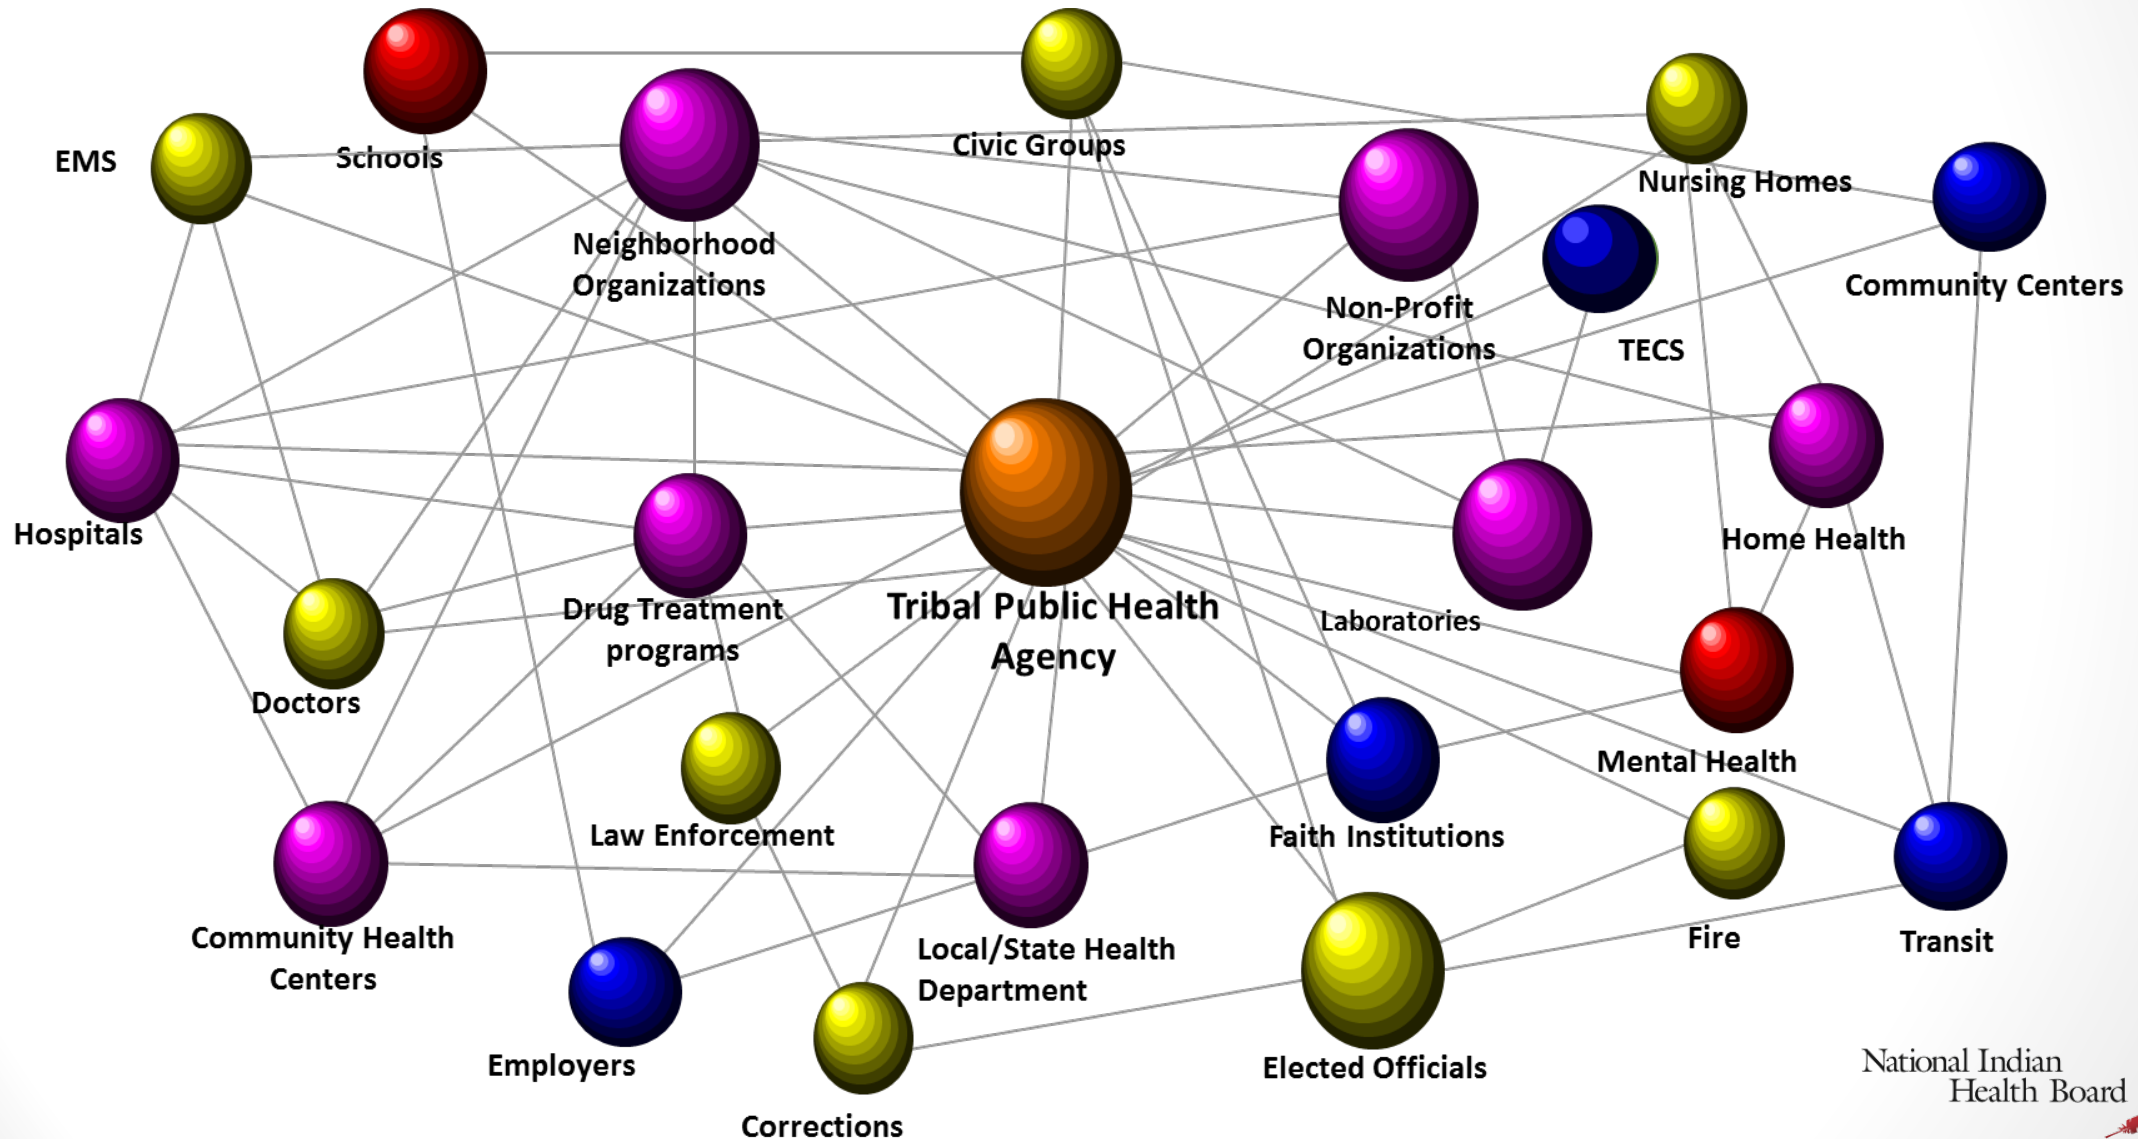

Tribal Public Health

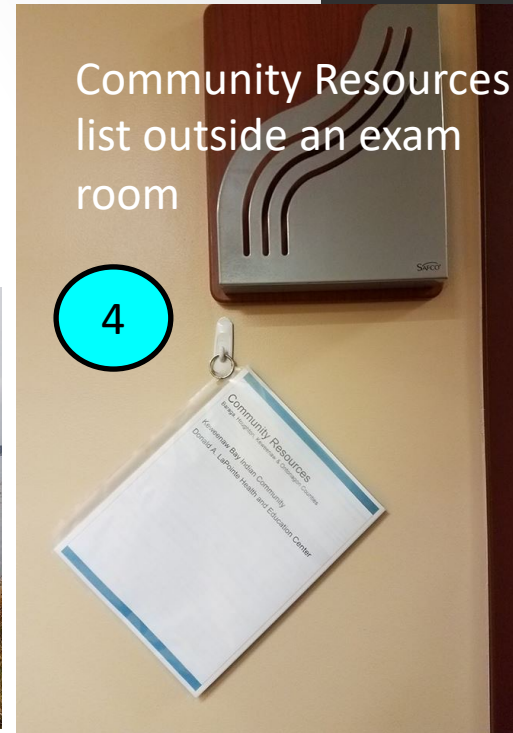

- Tribes have an inherent right to promote and protect the health and welfare of their citizens, using the methods most relevant for their communities.
- Public health systems that are managed by Tribes for Tribes
- Highly varied across Tribes/organizations
- “Community health”

Seeing Tribal Public Health

Seeing Tribal Public Health

Community Infrastructure vs. Public Health Infrastructure

Community Infrastructure

- the basic physical and organizational structures and facilities needed for the operation of a society or enterprise. (for a society to function)
- Examples of modern infrastructure: transportation systems, communication networks, sewage, water, and power systems.

Public health infrastructure

- the basic physical and organizational structures and facilities needed for the operation of a public health system (for creating conditions in which people can be healthy)
- Examples: workforce, authority, communication networks, partnerships

Public Health Infrastructure Brainstorm

What is it that holds up the Tribe's public health services in your community?

- Jot down **3+ things** that are needed for your Tribe to promote and protect the public's health in your community.
- Think about a framework; what pieces are needed and if they weren't there, the system would fail or not work well.

IOM Report Impact on Public Health Timeline

Public health infrastructure provides communities, states, and the Nation the capacity to prevent disease, promote health, and prepare for and respond to both acute (emergency) threats and chronic (ongoing) challenges to health. Infrastructure is the foundation for planning, delivering, evaluating, and improving public health.

HP2020 Components of Public Health Infrastructure:

1. A capable and qualified workforce
2. Up-to-date data and information systems
3. Agencies capable of assessing and responding to public health needs

What are the 10 ES?

- “A framework for public health to protect and promote the health of all people in all communities.”
- Focus on policies, systems and services to promote health.
- They are not all the services a public health department needs to provide by itself!

Takeaways

- Tribal public health infrastructure is complex in nature and requires ongoing inclusion and support.
- There is a need for improved Tribal representation and feedback during public health infrastructure strategizing and planning.
- Tribes need to be better recognized as governmental providers of public health in influential documents.
- Tribal priorities may not be reflected adequately in state and local priorities.

What is crucial to Tribal Public Health Infrastructure?

- Where can we look?
 - Stories from the field
 - Discussions and presentations
 - Tribal testimony to Congress
 - NIHB legislative and policy agenda
 - Public Health in Indian Country Capacity Scan (PHICCS)
 - NIHB's TA activities
 - **Where else?**
 - **Please share in the chat box!**

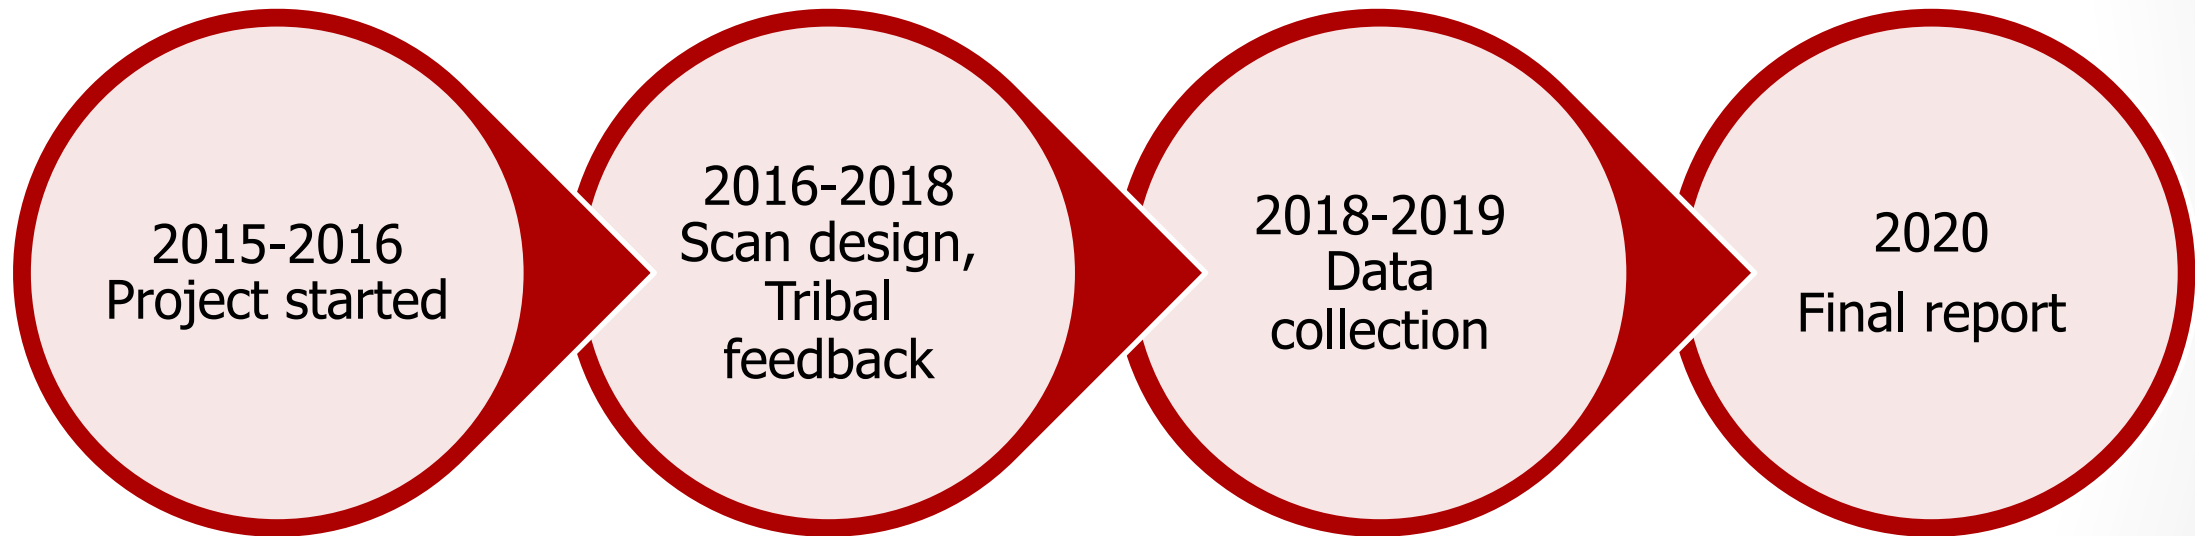

National Indian Health Board

Infrastructure in action

THE PUBLIC HEALTH INDIAN COUNTRY CAPACITY SCAN (PHICCS)

PHICCS Project Overview

*Ongoing project support from CDC's Center for State, Tribal, Local, and Territorial Support (CSTLTS)

2019 PHICCS Final Report

- Focus areas:
 - **Needs** – Assessing Tribal public health systems to identify needs
 - **Priorities** – Identifying Tribal priorities for development and resource allocation
 - **Opportunities** – Identifying opportunities for training and technical assistance
 - **Baseline** – Establishing a baseline to measure progress over time

Infrastructure in Action

- Key areas in PHICCS:
 - Workforce capacity and needs
 - Data systems and partnerships
 - Public health authority and governance

What comes to mind when you think of workforce and workforce development?

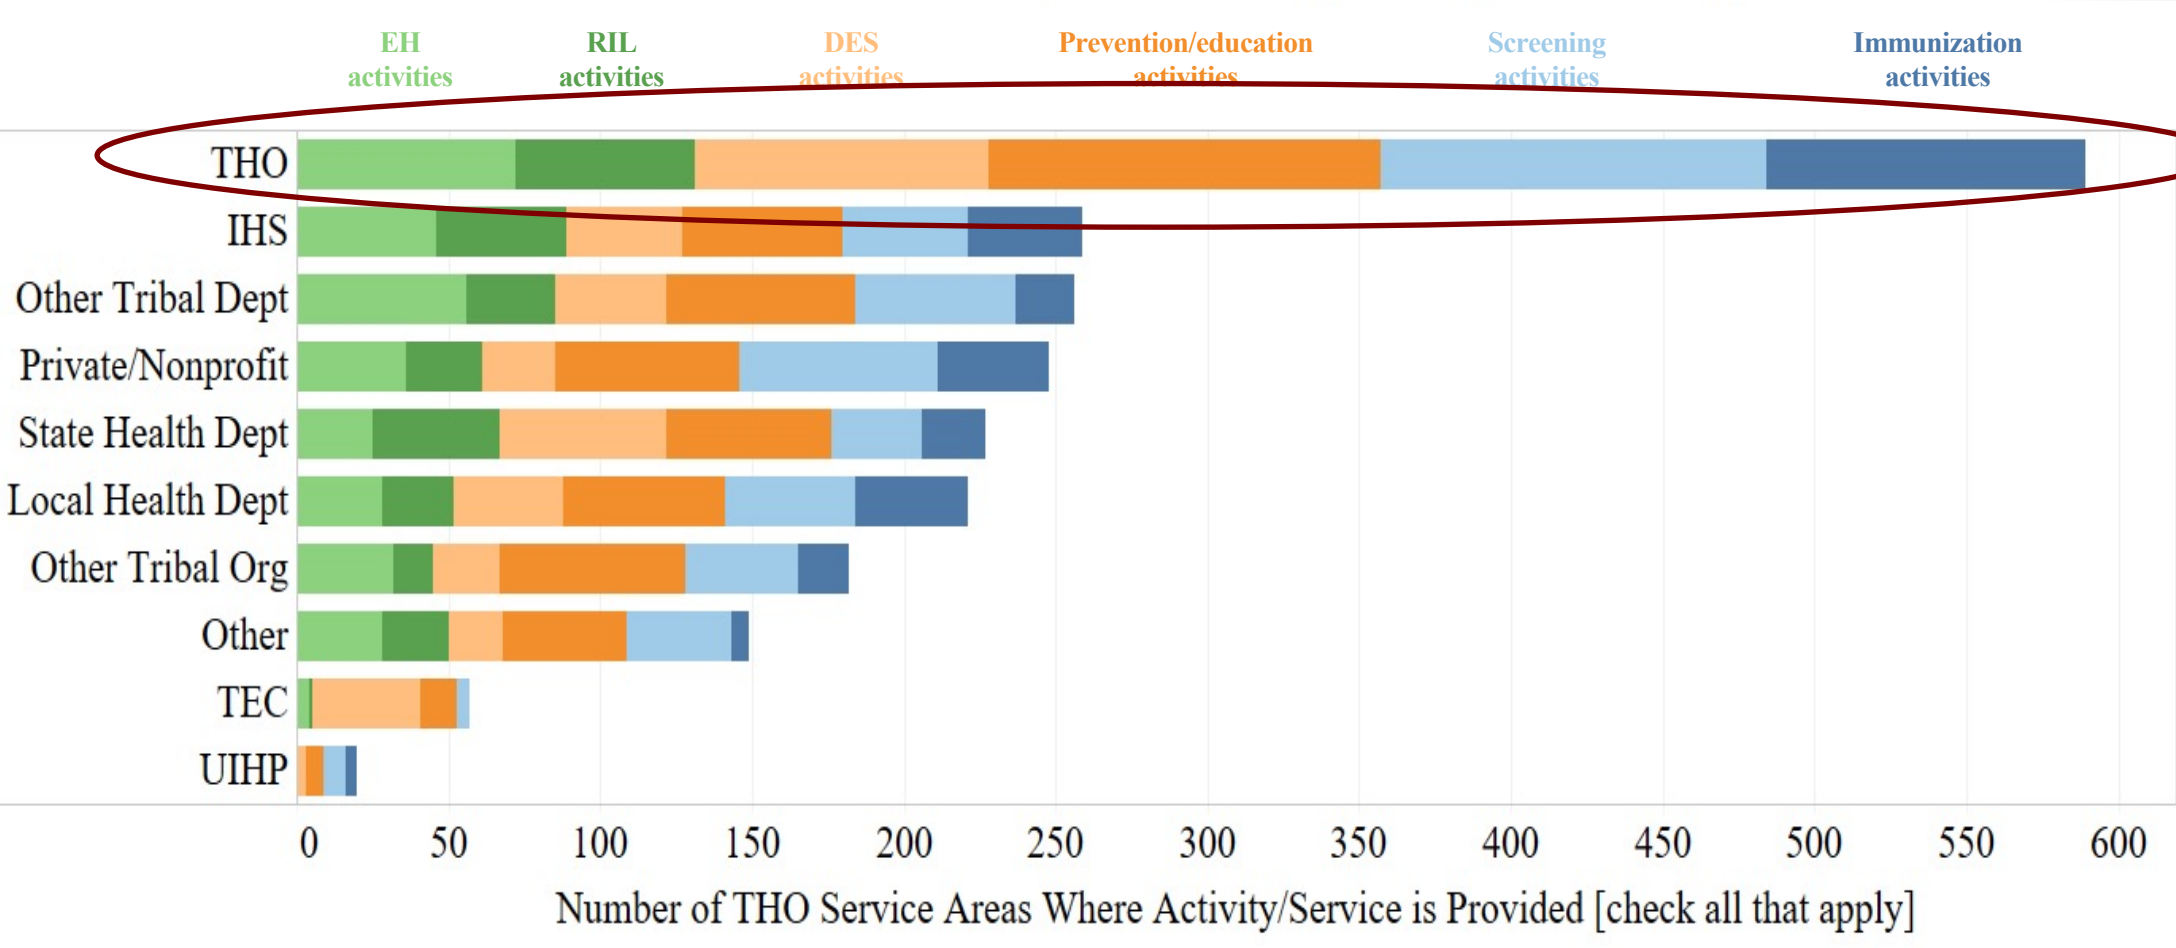

What comes to mind when you think of data systems and partnerships?

What comes to mind when you think of public health authority and governance?

Provision of Public Health Activities

Workforce – Highest Averages

Occupation	Funded FTE	Funded FTE Filled
Behavioral health staff	8.7	6.6
Office and admin support	5.0	4.2
Business and financial operations	4.6	4.0

Workforce – Highest Averages

Occupation	Funded FTE	Funded FTE Filled
Epidemiologist/Statistician	0.2	0.2
Public Health Informatics Specialist	0.2	0.1
Public Health Information Specialist	0.2	0.2

Workforce Needs– Highest Averages

Occupation	Funded FTE Vacancies	Additional Funded FTE Needed
Behavioral health staff	1.7	1.8
CHRs	0.6	1.2
Nurse practitioners	0.6	n/a
Public health nurses	n/a	1.1

Workforce Development Needs

Training

Technical skills (data collection/analysis), and general training on public health

Professional development

Certification and licensing

Staffing

Including hiring and retention

PHAB-related

Assessment, performance improvement, and accreditation

Technical assistance

Assistance with epidemiology, data analysis, and public health informatics

Considerations for Tribal Workforce Development

- COVID-19 highlights the need for continual PH workforce support, including in emerging infectious disease preparedness
- Many Tribes may engage a variety of sectors for PH work
 - Development opportunities need to consider that many Tribal PH professionals may wear many hats

Tools for workforce development

- Partnership development – what is needed?
- Core Competencies

National Indian Health Board

DATA SYSTEMS AND PARTNERSHIPS

PHICCS: Data systems and capacity

- Data collection is core public health capacity
- Enable Tribes to build real-time understanding of changes in Tribal health status
- Surveillance is “the ongoing, systematic collection, analysis, and interpretation of health-related data essential to planning, implementation, and evaluation of public health practice.” — *CDC Field Epidemiology*

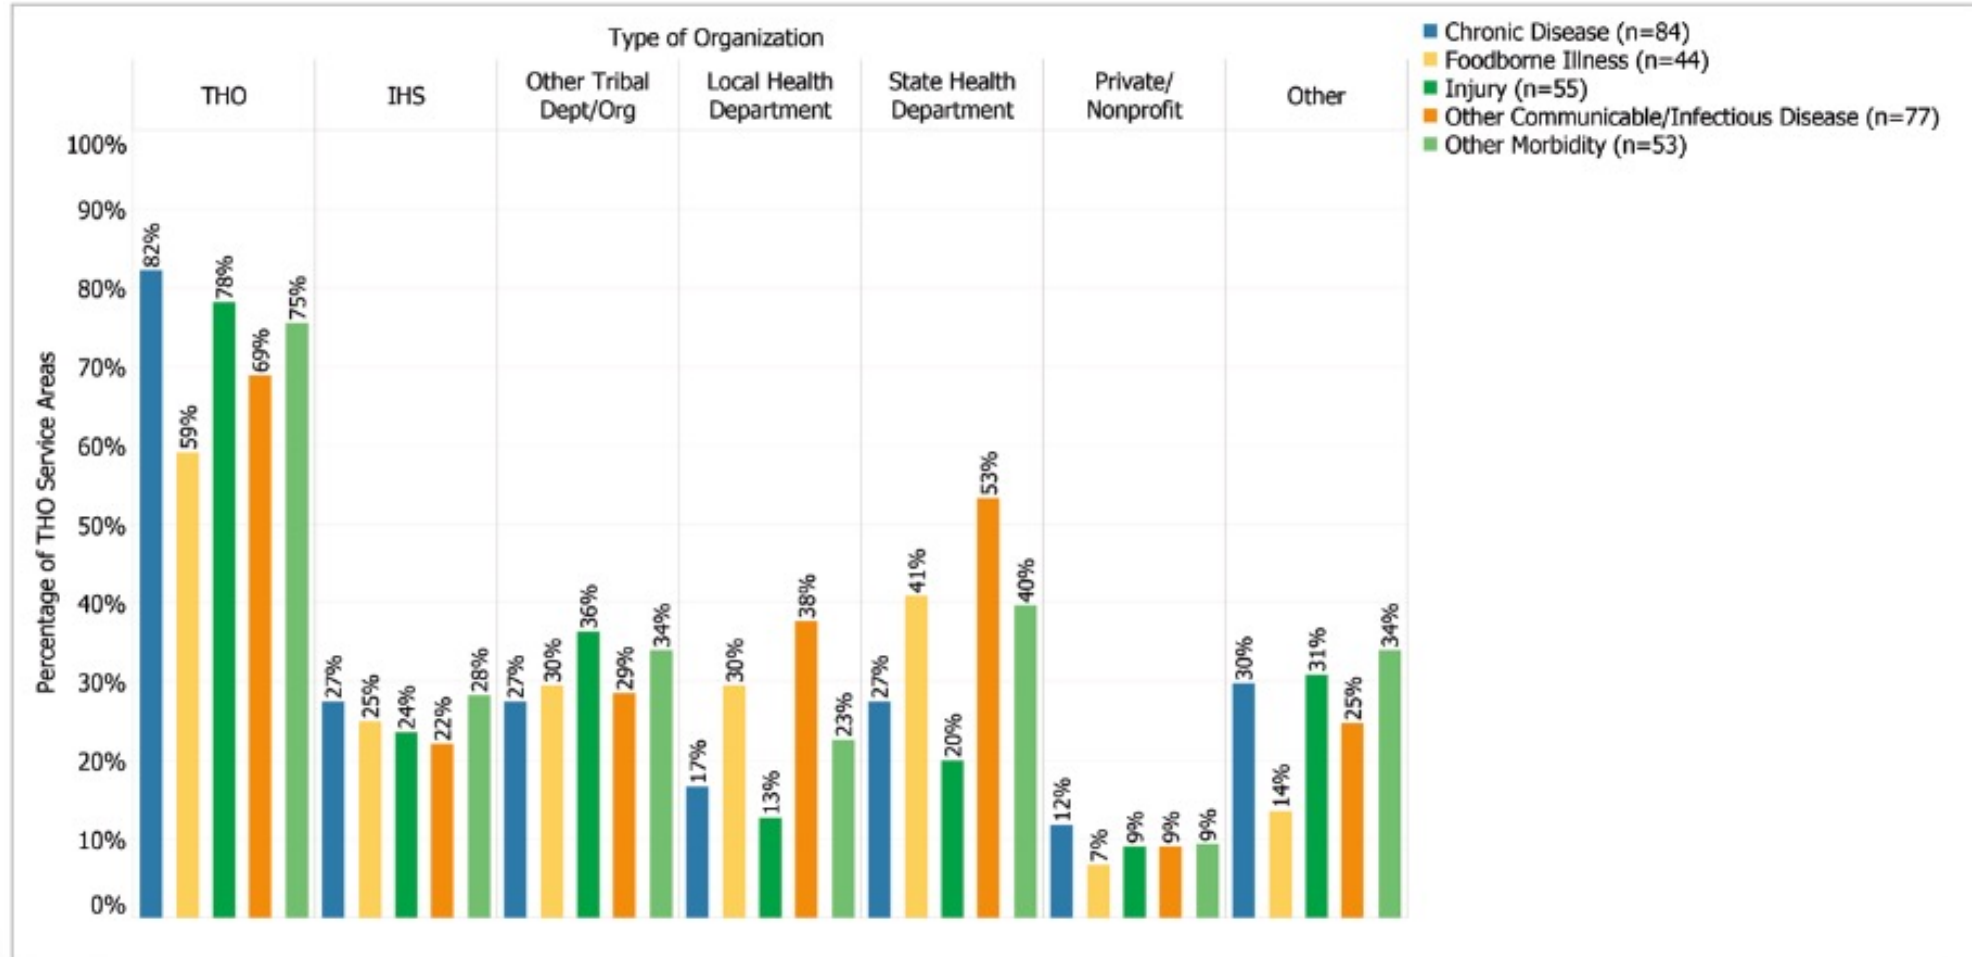

PHICCS: Data collection

Figure 17 DATA COLLECTION, EPIDEMIOLOGY, AND/OR SURVEILLANCE (DES) ACTIVITIES

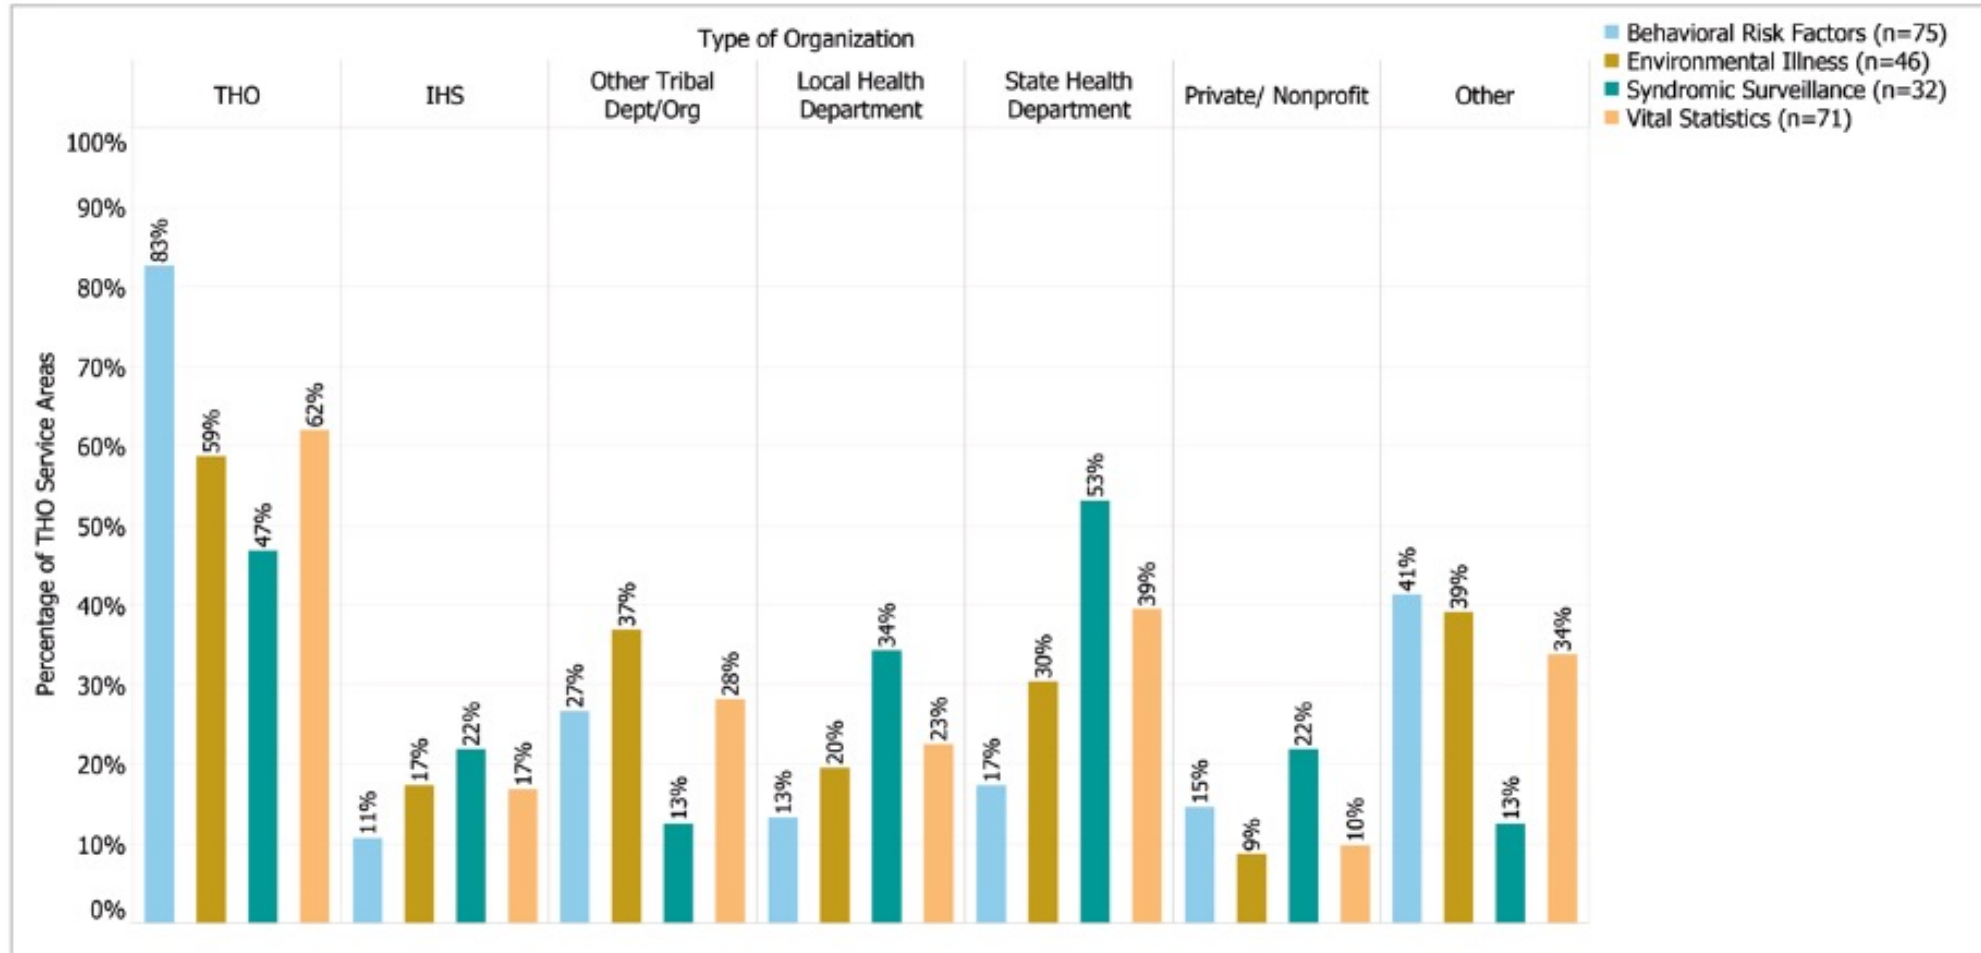

PHICCS: Data collection

Figure 18 PHYSICAL HEALTH DATA COLLECTION, EPIDEMIOLOGY, AND/OR SURVEILLANCE (DES) ACTIVITIES BY PROVIDER TYPE

PHICCS: Data collection

Figure 19 SOCIAL/EMOTIONAL HEALTH & OTHER DATA COLLECTION, EPIDEMIOLOGY, AND/OR SURVEILLANCE (DES) ACTIVITIES BY PROVIDER TYPE

Considerations for Tribal PH Data Systems and Partnerships

- Who collects the information you're looking for?
 - Is it already being collected by a Tribe/department/organization/agency?
 - Will you need to establish new systems?
Partnerships?

National Indian Health Board

PUBLIC HEALTH
AUTHORITY AND GOVERNANCE

PH Authority and governance

- Six core functions of public health governance:
 - Policy development
 - Resource stewardship
 - Continuous improvement
 - Partner engagement
 - Legal authority
 - Oversight

Authority: Governing Body

Prompts:

- Who is on your governing body?
- How are they chosen?
- How do they interact with the health department?
- Who governs the health department? Is this different than your Tribe's government?
- Who is responsible for providing public health activities?

Public Health Authority

- Governance
 - Ranged from 0-4 governance structures
 - Single structure most common, including Board of Health/Health Board (37%) and Tribal CEO/Chair (37%)
- Public health laws/policies
 - 59% reported having any type of law/policy
 - Policies/goals/priorities most common (84%)
 - Lower use of regulations, codes, taxes, fees

Administration

Prompts:

- What key positions are part of your health department?
- What is their background (experience, education, etc.)?
- What principles should they embody?
- What is their role?

Questions:

- What forms of governance do you see in your communities?
- What roles should governance bodies have?

National Indian Health Board

HEALTH EQUITY AND TRIBAL PUBLIC
HEALTH

What comes to mind when you think of health equity?

Equality

Equity

© 2017 Robert Wood Johnson Foundation.
May be reproduced with attribution.

<https://www.rwjf.org/en/library/infographics/visualizing-health-equity.html#/download>

- CDC: “**Health equity** is when everyone has the opportunity to be as healthy as possible.”

What is missing from these definitions that is unique to Tribes?

Gap in Resources and Tools that Contribute to Health Equity

- Healthy People
- CDC's Tribal Epidemiology Centers Public Health Infrastructure Program
- Spirit of Community Health Policy Brief

Health Equity Support

- Partnerships
- Tribal-specific resources
 - PHICCS
- Tribal Public Health Accreditation Advisory Board (TPHAAB)
- Tools and Resources

Strategies to support Health Equity

- Plan for it (strategic planning)
- Collect data and analyze
- Consider the social determinants of health
- Build frameworks/models for *Tribal* health equity

Thank you!
