

# Moving Beyond Race and Ethnicity Data Collection to Define AI/AN Communities

**NPAIHB**

*Indian Leadership for Indian Health*

# Northwest Portland Area Indian Health Board

**Vision:** "Wellness for the seventh generation"

**Guided by:** Tribal Sovereignty, Traditional Indigenous Knowledge, Culture as Health Promotion

NPAIHB

Indian Leadership for Indian Health

# Visibility through data

**"Closing [economic and health disparity] gaps and addressing program and policy issues is complicated by the invisibility of American Indians and Alaska Natives in their own land.**

**It is not clear if invisibility results from lack of data or if lack of data leads to invisibility."**

*-Michelle Connolly (Blackfeet/Cree) et al, 2019, Statistical Journal of the IAOS 35(1)*

NPAIHB

Indian Leadership for Indian Health

# Health data challenges for AI/AN communities

Data  
Access

- **Siloed and inaccessible data across multiple entities (Tribes, States, IHS, CDC)**

Data  
Collection

- **Acknowledging and reconciling the political status of AI/AN people with race-based data collection**

- **Missing data and racial misclassification**

Data  
Analysis  
and  
Reporting

- **Failure to address diversity among AI/AN Tribes and communities or account for complex identities**

# Missing Data

**Completeness of race and ethnicity data varies widely by data collection systems, region, and jurisdiction**

**55.8%**

**51.2%**

**50.7%**

**40.3%**

**% person-level Covid-19 cases reported to CDC with complete race and ethnicity information**

**Range across States**

**0% - 87.2%**

Reference: Erickson S, Bokota R, Doroshenko C, Lewandowski K, Osei K, Flannery K, Dominguez A. Completeness of Race and Ethnicity Reporting in Person-Level COVID-19 Surveillance Data, 50 States, April 2020-December 2021. Public Health Rep. 2023 Mar 27;333549231154577. doi: 10.1177/00333549231154577.

# AI/AN Misclassification

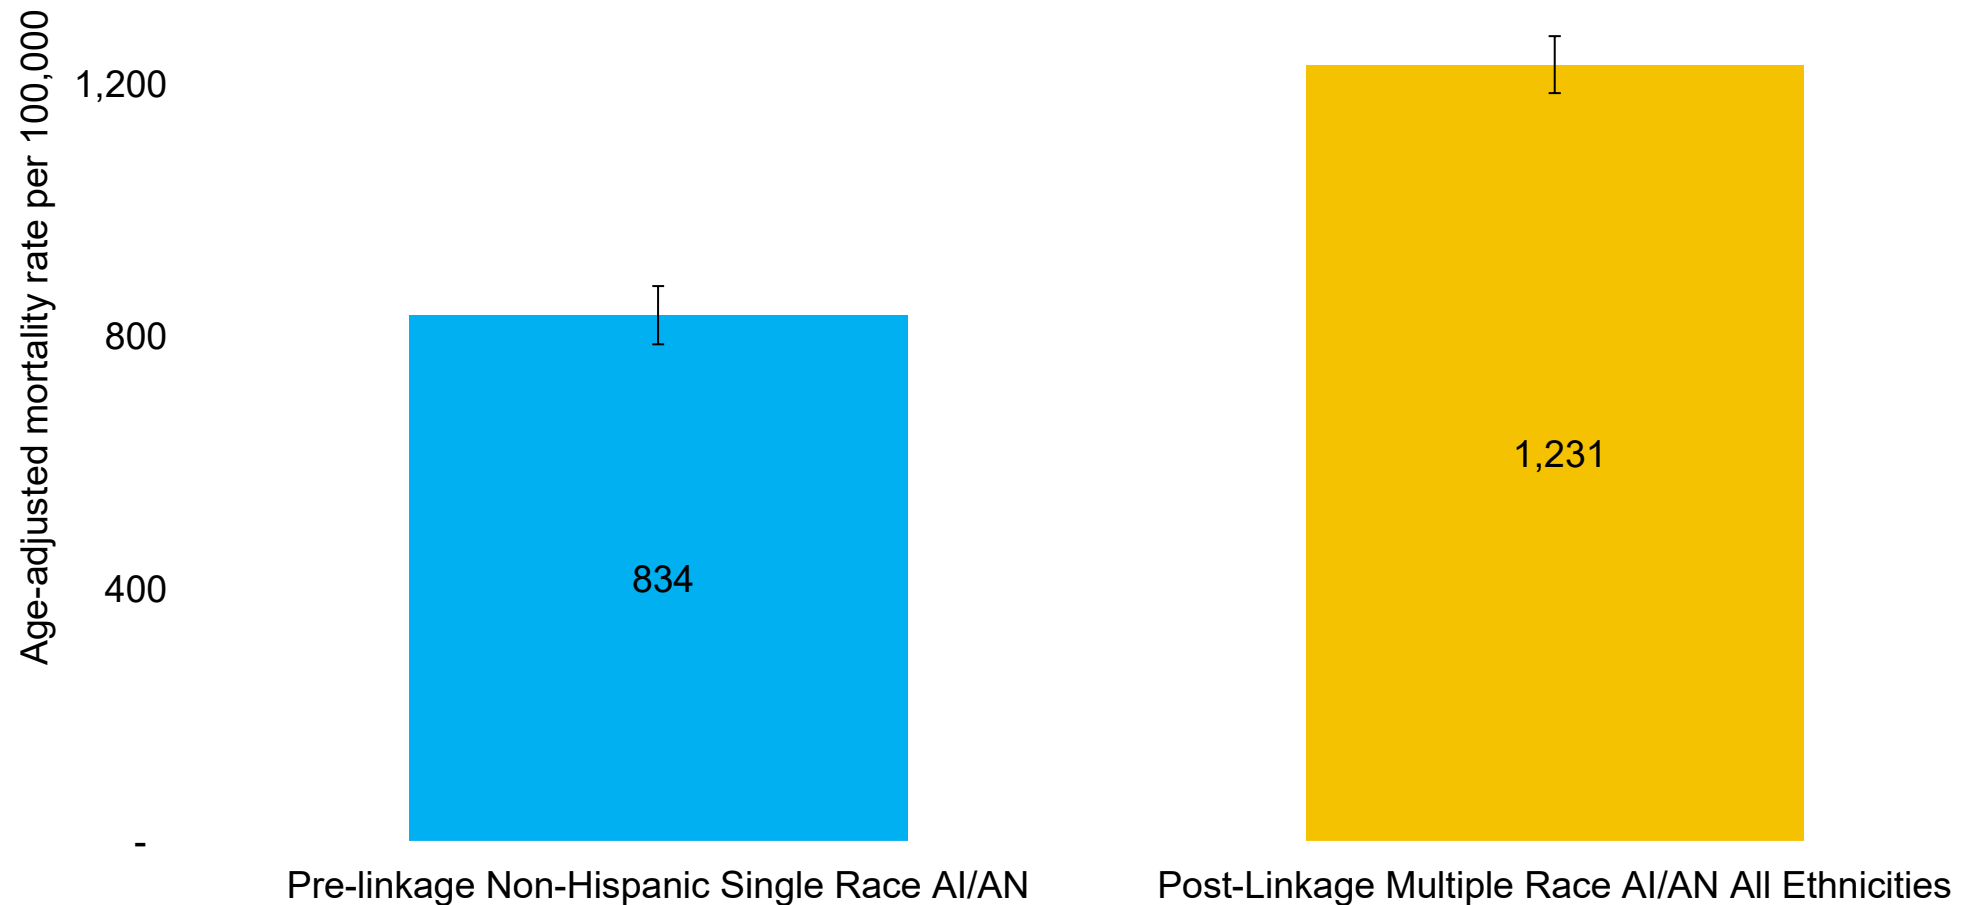

Misclassification happens when AI/AN people are recorded as being another race (usually White) in a dataset.

In the Northwest, AI/AN misclassification is **highest** in communicable disease, hospital discharge, and cancer data.

# Defining AI/AN People

1,600 The most inclusive “definition” of AI/AN people (used by NWTEC) resulted in a **48% higher** all-cause mortality rate in Washington compared to the least inclusive definition typically used by state and federal agencies.

# Addressing Challenges

## Siloed and Inaccessible Data

- ✓ Expand Tribal and TEC access to data held by state and federal agencies
- ✓ Develop a Northwest Tribal Data Hub to provide Tribes with data on their communities

## Missing data and Misclassification

- ✓ Conduct record linkages between Tribal and State data to correct misclassified AI/AN records
- ✓ Support policies to improve accurate and complete data collection

## Acknowledge diversity and complex identities

- ✓ Utilize inclusive ways of identifying and counting AI/AN people in data
- ✓ Support Tribal collection and analysis of data on their own communities

## Acknowledge the political status of AI/AN people

- ✓ Educate partners on the rights of sovereign Tribes and the unique political status of Tribal members
- ✓ Engage in policy consultations and advocacy efforts related to state and federal data collection

# OMB SPD-15

- **The U.S. Office of Management and Budget is developing recommendations to revise Statistical Policy Directive No. 15, which sets standards for maintaining, collecting, and presenting federal data on race and ethnicity. These standards were last revised in 1997.**
- **Portland Area Tribes, individually and via NPAIHB, provided comments on the initial set of proposals through written comment and during a virtual tribal consultation session.**

# Key Recommendations

- **Support** moving from two questions to collect race and ethnicity to a single combined question for self-reported race and ethnicity
- **Support** AI/AN individuals being able to check their Tribal affiliation or community attachment as a detailed category level, preferably through drop down lists of federally recognized Tribes
- **Suggest** the ability to distinguish between AI/AN Tribes or Corporations, First Nations/Metis from Canada, and Indigenous Tribes from Mexico, Central and South America

# Key Recommendations

- **Request** Tribal Consultation on developing policies for allowing appropriate access to disaggregated data on individual Tribal Nations
- **Request** federal agencies develop replicable methods, tools, and datasets for population estimates at multiple geographic levels
- **Recommend** OMB work across agencies to ensure federal efforts are aligned and coordinated in meeting the needs of AI/AN communities

# Final Thoughts

- Tribes and urban Indian communities urgently need accurate and actionable data to improve their communities' health
- There likely is no single solution that will address the multiple challenges related to data collection and reporting for AI/AN communities
- Including Tribal input on data collection and release policies and the design of data collection systems is a **starting point** for improving the usability state and federal data for Tribes

# Acknowledgements and Contact

RESULTS FROM THE  
NATIONAL TRIBAL HEALTH  
CONFERENCE ROUNDTABLE  
ON RACE AND ETHNICITY  
STANDARDS

National Indian  
Health Board

Rochelle Ruffer, PhD  
National Indian Health Board  
Tribal Health Data Project Director

National Indian  
Health Board

# BACKGROUND

- BCBSA Roundtable: “Setting Standards for Collection of Race Data in Healthcare Settings to Support Tribal Health Equity”
- National Tribal Health Conference in Anchorage, AK - Tuesday, May 2, 2023
- 125 roundtable participants shared their perspectives on how the healthcare industry should approach race and ethnicity data collection to best support Tribes, Tribal sovereignty, and Tribal health equity

# CONSIDERING DIFFERENT OPTIONS FOR HOW THESE QUESTIONS COULD BE PRESENTED

OMB Proposed definition of AI/AN: "All individuals who identify with any of the original peoples of North, Central, and South America."

Option for separating race question from Tribal affiliation

QUESTIONS THAT TOUCH IDENTITY ARE COMPLEX  
AND DEEPLY PERSONAL

---

“What keeps us alive, what keeps us here: it's identity, relation. It's the earth. It's each other.”

---

“I think it's great having these conversations, but obviously these are very complicated issues.”

---

“That makes no sense why we constantly have to justify who we are and what box we fit in.”

## TAKE-AWAYS

*What did we learn?*

WHAT IS THIS DATA REALLY FOR?

---

*"Race" as a Proxy Variable*

“WHAT'S THE INTENT BEHIND ASKING  
THOSE QUESTIONS [ABOUT RACE OR TRIBAL  
AFFILIATION]? THAT'S IMPORTANT TO  
KNOW AS WE'RE TRYING TO MAKE  
RECOMMENDATIONS HERE.”

“RACE”  
AS A PROXY  
FOR  
“RACISM”

Figure 2. Age-adjusted estimated prevalence of diagnosed diabetes by race/ethnicity group and sex for adults aged 18 years or older, United States, 2018–2019

Note: Error bars represent upper and lower bounds of the 95% confidence interval.

Data sources: 2018–2019 National Health Interview Survey; 2019 Indian Health Service National Data Warehouse (for American Indian/Alaska Native group only).

## “RACE” AS A PROXY FOR “RACISM”

- “As a Native person who does not appear native, people don't look at me and think I'm American Indian. But race is trying to get at that **phenotype**. What do you look like, and **how does that impact how people treat you in the world?**”
- “When you think about people who are doing ancestry.com, and so say they are told by this database that they have American Indian, Alaskan Native, or Indigenous heritage, although it doesn't include necessarily a Tribe, that indicator may prompt someone to answer this question, and what does that do? Because from a Tribal perspective, **what we're looking at are the social determinants and the demographics that impact, say, chronic disease rates in our communities.** And we want to gather the information that surround that dynamic. And **if you have someone who is dissociated from that for whatever colonized reasons, it may skew the data to some degree.**”

# WHEN THE GOAL IS UNDERSTANDING THE IMPACT OF RACISM, SHOULD ALL INDIGENOUS PEOPLE BE COUNTED?

- “Working in an urban space on the East Coast, I [preferred the more inclusive option] because of the diversity of local city populations. In a place like Rhode Island where there are many thousands of Tribal peoples who are not eligible for enrollment... and this is because they've **endured many centuries of colonization as a first contact people and have been greatly written out of history** by all of our states in those areas and also de-tribalized formally... So I think that **we do have to find a way to capture folks who have this diverse ancestry**. And we have a lot of folks from Canadian First Nations in the Northeast... and I think this is true in a lot of urban areas where there's a tremendous Caribbean, South and Central American population who identify strongly as Indigenous peoples. They speak their languages. We see each other at the same kinds of cultural events, but we also recognize these vast differences in our indigeneity based on our ancestral experiences with colonization.”
- “We talked a lot about just saying "Indigenous," because it opens the spectrum to a lot of Indigenous peoples. And so because we are a nation of mixed ethnicities, that opens it up so that we're not having to do these sub-limits... We don't want to limit ourselves.”

## “RACE” AS A PROXY FOR POLITICAL STATUS

- “When it comes to our people, we have a trust obligation that we rely upon. We have political status. We have Tribal Sovereignty. And when folks are talking about American Indians and Alaskan Natives, they need to be talking about it in that parlance.”
- “Why are we asking about the South Americans and First Nation people, when the Federal Government has a trust responsibility to the Native people here in the United States?”
- “Race is trying to get at that phenotype... But we also need a [separate] question about the political status.”
- “[I would want to] add a second part to that question to make sure I'm also counting citizenship and membership specifically so that I can measure those who are obligated to services from IHS, if IHS is actually fulfilling their obligation to Tribal members who have that obligation.”

## THE POLITICAL STATUS OF “AI/AN” IS CONNECTED TO SPECIFIC, HARD-WON RIGHTS

- “I do not like the term “American Indian,” but I also recognize that many of our foundational policy victories from our parents' generation, American Indian Religious Freedom Act, et cetera, et cetera, those use that same terminology. So I'm okay with it in terms of that racial category, because I recognize that as a citizen of the Standing Rock Sioux Nation that I have the right to assert my dual citizenship. So I don't mind being racialized in this category as long as I can foreground my citizenship.”
- “Federally enrolled, that means something... It's the reason why Tribal members still exist.”
- “We have to remember ... [that Tribes] had to fight major legal battles in order to get their federal recognition back, and they have. And so to discount those people is really not a good thing.”

## WHAT IF WE WANT TO TELL THE STORY OF HEALTH OF OUR WHOLE COMMUNITY?

- “As an epidemiologist, I think I would want to know the answer to [the Tribal affiliation question] as a whole, as citizenship, membership, affiliation, or community attachment.”
- “I think what we're trying to get to is descendant. That's the word, right? We're talking about people who are citizens, members of the Tribe, or descendants, right, of an American Indian/Alaskan Native Tribe. We're talking about people that actually have a biological connection right to the Tribe.”
- “We have non-Natives that grow up in Native communities... are they part of the community? Do they need to be counted as American Indian? Or as having community attachment?”

THE “RIGHT” QUESTION DEPENDS ON WHAT  
WE ARE REALLY TRYING TO MEASURE

# WHAT IS THE RISK OF HARM?

---

*Ethics, Accountability, and Sovereignty*

# ETHICS, TRUST, AND POTENTIAL DATA MISUSE

- “Mistakes on how data is gathered can be extremely harmful to Native peoples. ”
- “I've heard a lot of good comments about ethics. I think that's one of the biggest concerns about data being withheld from Tribes and held against us.”
- ““Well, tell us what you want,’ and we tell them, thinking they're going to take it wholeheartedly with good ethics and good mindset...And I often feel like when we get into these sessions, there are really good ideas, but that person that had that really good idea will retire. And five years, now all of a sudden we're starting with someone brand-new who said, ‘No, that's not what it meant. It never meant that. It meant this.’”

# DATA SOVEREIGNTY & AVOIDING UNINTENTIONAL HARM

- **“Tribal leaders need to decide if they want to collect that information about political status.** As someone who would love to use this in the work that we do, I think it would be amazing, but I also think we need to acknowledge that there might be hesitancy to include that by Tribal leaders for a lot of reasons, not the least of which is that **it could be weaponized against them.** And so if that were to be included, there has to be some sort of acknowledgement of that and some sort of **protections that this won't be used to harm Native people** in some way or used to get—so again, what if we had a dashboard run by the Federal Government that lists every Tribe by their obesity rates, right? If you collect Tribal affiliation, you could do that. And as a Tribal leader, I could see being like, “Well, I'm not sure I want you guys to collect that information on my people if you're going to do something like that.” **So if this [question about Tribal membership] was to be included, there has to be protections.”**

- “[With the option] to identify a Tribe in there, that runs the risk... of creating a Tribal registry that's not under Tribal sovereignty... I anticipate that that would be not something everybody would be okay with. And I was concerned. Now I'm an epidemiologist, and if I had no ethics or morals, I would love to have that data [and not worry about] how I get it, but that's not the world I live in.”

“THE OFFICE OF MANAGEMENT AND BUDGET IS GOING TO DO THIS WHETHER WE PARTICIPATE OR NOT, AND THEY'RE GOING TO CREATE STANDARDS THAT WILL BE USED BY EVERY AGENCY OF THE FEDERAL GOVERNMENT TO COLLECT DATA, AND THEY WILL TELL A STORY BASED ON THAT DATA. AND WE NEED TO HELP THE AUTHORSHIP OF THAT DATA AND TO SET THE COURSE FOR THAT RIVER SO IT DOES NOT FLOOD OUR VILLAGES.”

WILL THIS BENEFIT TRIBES?

---

- “Then I would also say there has to be some guarantee that that information is getting back to the Tribe, because the reason to include [Tribal affiliation] is so that I know in my community what the rates of diabetes are better than I do now. But if you just collect it and put it on a dashboard and then never tell me, I might not want that question.”
- “If you are the epidemiologist that's getting this data or you're the Tribe that wants this data, you really want the most granularity in that data so that you can do what you need with that data and that's most applicable to your Tribe or your community. And so a category that offers as much granularity in that data is probably going to be the best option.”

“THERE'S A NARRATIVE HERE THAT'S BEING BUILT, AND WE WERE NEVER BROUGHT INTO THE CONVERSATION OF HOW WE WANT TO CREATE THAT NARRATIVE TO DESCRIBE OURSELF, TO DESCRIBE OUR COMMUNITIES. WE SHOULD HAVE HAD INPUT IN THAT FIRST PLACE. LIKE WE WERE TALKING ABOUT, WHAT'S THE INTENT BEHIND THIS? WE DON'T KNOW. WE DON'T KNOW THE FULL PICTURE YET. SO WHY ARE WE EXPECTED TO ANSWER THESE QUESTIONS, GIVE OUR OPINIONS, WHEN WE DON'T KNOW HOW THIS IS GOING TO IMPACT OUR COMMUNITIES?”

# HOW WILL IT BE OPERATIONALIZED?

---

*Practical Considerations*

# HOW WILL THE DATA BE CAPTURED?

- “Making sure how it's operationalized. So it's how are we asking it, and how would it be interpreted? How is it operationalized with the other race/ethnicity variables?”
- “I'm thinking if they choose to do Tribal affiliation, they really should have a dropdown menu linked to the 576 federally recognized Tribes, only because you think they can read everybody's handwriting? Really? And what if the person only writes in their language? What are they going to do with those? Throw them out? Not count them? I can just see it being a disaster.”
- “I am enrolled in Fort Peck under Sioux, but I'm also Chippewa Cree. So which do I go through?”
- “It's really not being discussed here, which is **the clan-ship system that's unique to the Tribes**, and they hold it dear.”
- “It's how are we asking the question about Tribal affiliation... making sure it's really clear to the person who's answering it that we want to list all Tribal affiliations, right? So we want to capture that richness, that complexity of that information. So how the question is phrased and then how the respondent will fill it out is really, really important so that we're getting the right information.”
- “We liked the idea that you can select multiple race/ethnicity and make sure that you're putting all of your affiliations in there.”

# HOW WILL THE DATA BE SORTED, ANALYZED, AND REPORTED?

- “How is this information then accessed, analyzed, and disseminated? So there's multiple layers to this question.”
- “As far as just how the data from that particular subcategory option is being taken, like electronic or on paper and that kind of thing, how that transitions into the data that we see as far as numbers.”
- “These two options really leave out a category that's important when you're looking at mixed ethnicity, mixed race, mixed heritage. And often times people are not going to be wanting to choose one or the other, and so they may not even answer it. Or if they answer in two categories, typically that data gets lost and doesn't even get counted.”
- “If you pick other nationalities or whatever, it is kicked out. It's not counted.”
- “[Sometimes mixed-race Caucasian and AI/AN] will be counted as Caucasian, though. But why? I always wondered why. So we have Caucasians, but we're the Indigenous people. Why doesn't it kick back to us instead of going to a white man and counting towards them? We were here first. This is our land, and it really should kick back to an Indigenous factor.”

# SUMMARY OF MAJOR THEMES

- No consensus on terminology to use or standards for inclusion/exclusion
- Concerns around the intended purpose of the data
- Distrust & concerns around data misuse, data security
- Concerns around Tribal data sovereignty
- Concerns around implementing standards in a way that will be practical and effective

# RECOMMENDATIONS

- Collecting more data requires enacting more protections against the weaponization of the data collected and to uphold Tribal data sovereignty.
- Need to be clear about the intent and reason for collecting the data.
- There is a need for building trust.
- Improve on communicating the reasons for the data collection.
- Improve guidance on how people will be represented in the data if they select multiple races/ethnicities and/or Tribes/Corporations.

THANK YOU

—  
Rochelle Ruffer, [rruffer@nihb.org](mailto:rruffer@nihb.org)

# Roundtable: Promising Practices to Improve How Race & Ethnicity Data Are Used in Public Health, Healthcare, and Research- Current Strategies for Improvement through an Intergenerational Lens

---

Office of the Director

CDC

National Indian Health Board

Tribal Health Equity Data Symposium

September 25-6, 2023

## Data on **American Indians & Alaska Natives** Are Hard to Access

Nearly 6 million American Indians and Alaska Natives (AIAN) live in the United States. However, it is hard to uncover AIAN data in population health surveys because of the limited accessibility of AIAN information in these datasets.

**AIAN** make up 1.7%  
of the U.S. population

Source: 2019 American Community Survey, American Indian and Alaska Native alone or in combination with one or more race

*"Federal health surveys provide nationally representative estimates for the U.S. population, but insights on Native populations are limited because of the small number of Native respondents in probability-based sampling frames and non-collection of tribal affiliation. The small sample size leads to data suppression and aggregation of data and racial/ethnic identity tabulation rules that inaccurately capture the Native population - many of whom are multiracial and also identify as Latinx/Hispanic."*

-Ninez Ponce, Professor of Health Policy & Management & Director, UCLA Center for Health Policy Research, UCLA, Fielding School of Public Health

# Current Strategies for Improvement and Correction

- Oversampling
- Release pooled multi-year public use files
- Include information to identify the overall AIAN population
- Reduce cost/time for accessing restricted data
- Report on how race/ethnicity is defined in your study
- Note when conclusions about AIAN health are based solely on single-race non-Latinx AIANs

# Improving Data Capacity for American Indian/Alaska Native Populations in Federal Health Surveys

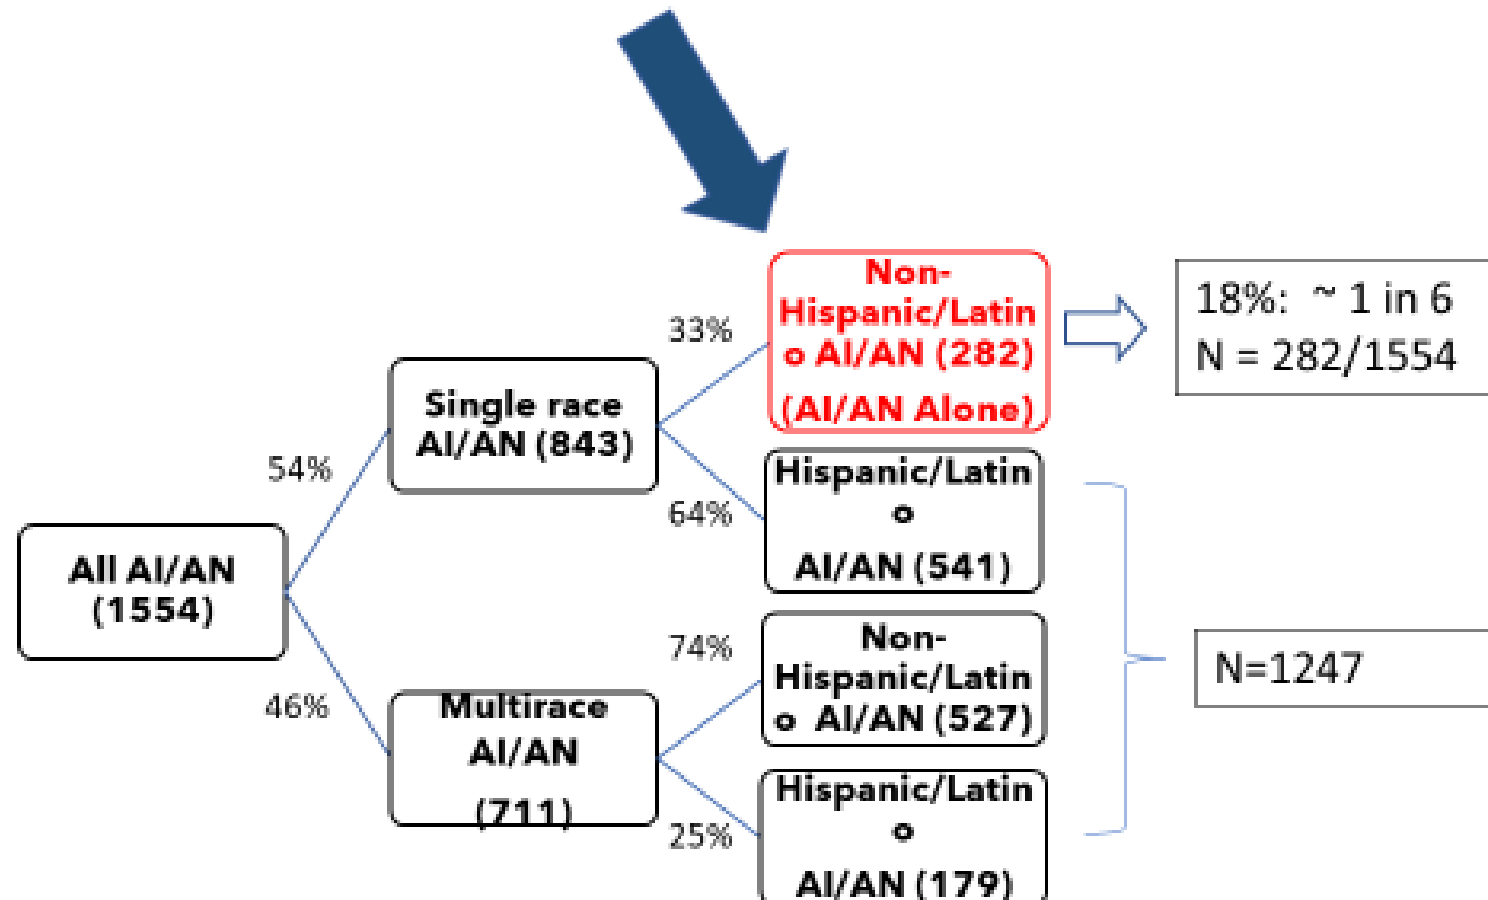

- Key messages:
  - Among the subgroups with the highest rates of poor health outcomes is the **American Indian/Alaska Native (AIAN) population**, which is also at significant risk of misidentification in national surveillance instruments.
  - This report demonstrates that **classification and weighting decisions affect the measurement of the population characteristics and health outcomes for the AIAN population**. We share observations that can inform data production and processing efforts in major health surveys to advance the insights on the AIAN population. **Increasing data capacity for the AIAN population will improve the knowledge about the health of specific subgroups within the AIAN population, and better guide allocation of public health resources.**

# Implications for Coding Race and Ethnicity for American Indian and Alaska Native High School Students in a National Survey

## American Indian or Alaska Native (AI/AN) Racial/Ethnic Classifications National Youth Risk Behavior Survey, 2017 and 2019

# Recommendations from the National Commission to Transform Public Health Data Systems: AIAN Expert Panel

- Each panel consisted of individuals who brought expertise to the issues based both on **their work and training with data** and **their own lived experience**.
- Having the expertise and voices from those communities was critical to shaping recommended strategies and approaches to advance data systems and data equity.
- All panels highlighted the importance of
  - **narrative change** around health, well-being, and equity;
  - the need to **decolonize and disaggregate data**;
  - the importance of **authentic community engagement in data decision-making**;
  - the importance of **training and capacity-building** around data;
  - and the need to **overlap intersectional identities** and experiences in more comprehensive data systems.

## Charting a Course for an Equity-Centered Data System:

Recommendations from the National Commission to Transform Public Health Data Systems

OCTOBER 2021

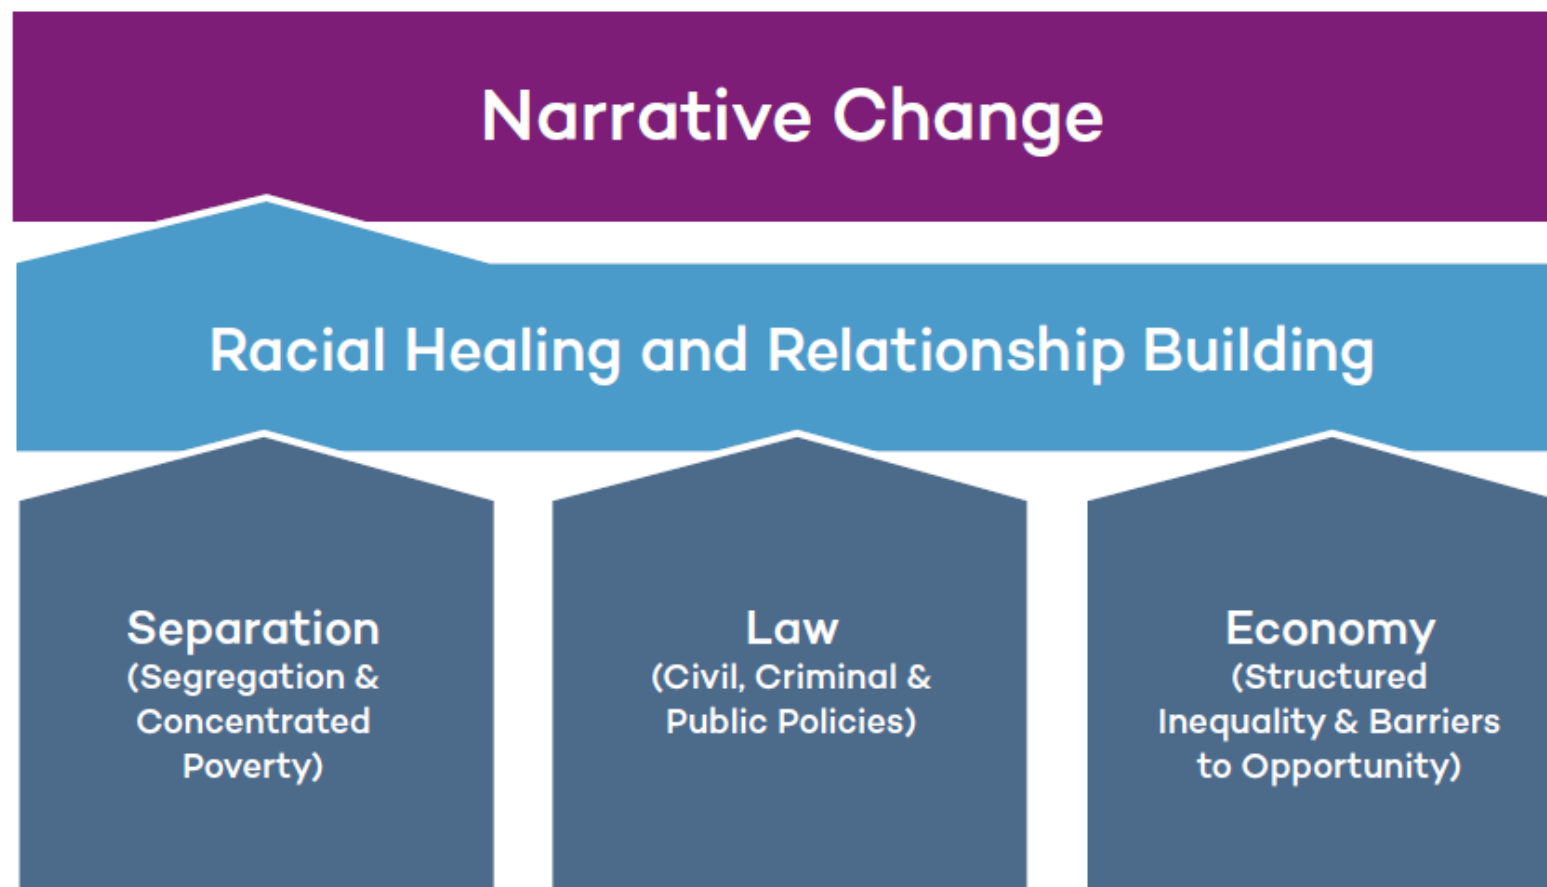

Robert Wood Johnson  
Foundation

The National Commission to Transform Public Health Data Systems was convened by The Robert Wood Johnson Foundation.

# Recommendations from the National Commission to Transform Public Health Data Systems (continued)

“Data speaks, it sings, it carves, it paints. And how we tell the story is very powerful.” -  
Commissioner Abigail Echo-Hawk

FIGURE 1. TRHT FRAMEWORK

## CALL TO ACTION SUMMARY

Government as well as private and other civil society sectors have a role to play in transforming our public health data system.

### SECTOR

### ACTION

#### FEDERAL GOVERNMENT

- Develop minimum standards about data collection, disaggregation, presentation, and access, in federally funded data collection efforts, with an orientation to “freeing federal data” or promoting greater access.
- Strengthen public health data infrastructure and incentivize the use of new data collection and analytic approaches.
- Federal funding for data infrastructure should be prioritized to systems that are standards-based and interoperable.
- Offer guidance on interpretation of racial/ethnic variation in health-relevant data to counter longstanding acceptance of the idea that these variations reflect biological differences rather than systemic, cultural, behavioral, and social factors.

Technology

---

# Overview

- Data Modernization Overview
- Tribal Data Modernization Projects
- Electronic Case Reporting (eCR) for Tribal Public Health

---

WHAT IS THE

# Data Modernization Initiative?

A national effort to create **modern, integrated, and real-time public health data and surveillance** that can protect us from any health threat.

DMI  
@ CDC

---

## Our Ultimate Goal

To move from siloed and brittle public health data systems to connected, resilient, adaptable, and sustainable **‘response-ready’** systems that can help us solve problems before they happen and reduce the harm caused by the problems that do happen.

***Better, Faster, Actionable Insights for Decision-Making***

# Tribal Data Modernization Project Funding

CDC is supporting data modernization efforts with tribal public health and healthcare partners. Initial funding of 3 partners totaling \$750,000 in 2020 has grown to funding of six partners totaling \$2,989,000 in 2021 and nine partners totaling \$4,076,245 in 2022.

## Accelerating Public Health Data Modernization in Tribal Jurisdictions

### Funded Entities:

- Alaska Native Tribal Health Consortium
- Rocky Mountain Tribal Leaders Council
- Northwest Portland Area Indian Health Board
- Wabanaki Public Health and Wellness

**2022 Total Funding:**  
**\$1,301,245**

## Tribal Data Modernization – Focused Investments

### Funded Entities:

- Chickasaw Nation
- Great Lakes Intertribal Council
- Northwest Portland Area Indian Health Board
- Southern Plains Tribal Health Board
- Wabanaki Public Health and Wellness

**2022 Total Funding:**  
**\$1,250,000**

## Data Modernization in Tribal Jurisdictions

### Funded Entities:

- Alaska Native Tribal Health Consortium
- Wabanaki Public Health and Wellness
- Northwest Portland Area Indian Health Board
- Rocky Mountain Tribal Leaders Council
- Chickasaw Nation
- Great Lakes Intertribal Council

**2023 Total Funding:**  
**\$3,499,917**

# Key Data Modernization Activities

## Focus Area

	Assessment	Governance	Data Integration	Infrastructure	Analytics	
<b>Partner</b>	<b>ANTHC</b>		Improved representation of Tribal groups within vaccination data	Developed Population Health Management Immunization Dashboard	Established automated processes for preparing raw data for analysis	
	<b>RMTLC</b>	Conducted data assessment and identified gaps in data exchange	Created agreements to improve health information systems		Data visualization trainings	
	<b>NIHB</b>		Automated real-time exchange of case reports	Streamlined Electronic Case Reporting (eCR)		
	<b>Wabanaki</b>	Compiled data into Wabanaki PH Surveillance System	Established data sharing agreements		Employ cloud technology for data lakes	Data analytic and visualization trainings
	<b>NPAIHB</b>	Assessed training needs for Northwest TEC	Established Advisory Committee for data asset assessment	Developed and implemented enhanced protocols and data-sharing agreements		Data visualization trainings
	<b>Chickasaw</b>	Develop data assessment and strategy	Develop Tribal Consortium Data Subcommittee			
	<b>GLITC</b>				IT improvements addressing gaps/needs	
	<b>SPTHB</b>	Conduct data capacity assessment and develop workplans
