Florida

Special Diabetes Program for Indians:

Saving lives in Florida and providing a strong return on federal investment

History

Congress established the Special Diabetes Program for Indians (SDPI) in 1997 to address the growing epidemic of diabetes in American Indian and Alaska Native (AI/AN) Nations. By allowing Tribes to determine their own approach, the program has become the nation's most effective federal initiative to combat diabetes and serves as a useful model both for diabetes programs nationwide and public health programs in Indian Country. SDPI is currently authorized through Fiscal Year 2023.

SDPI Outcomes

301
AI/AN DIABETES PROGRAMS IN 35 STATES

5.5%
DECREASE IN PREVALENCE OF DIABETES
Between 2013 and 2017

15.4%

↓

14.6%

END STAGE RENAL DISEASE REDUCED BY 54% Between 1999 and 2013- the greatest decline of any racial or ethnic group.

\$88,000 IN SAVINGS FOR MEDICARE FOR EACH PATIENT KEPT OFF CHEMODIALYSIS

TRIBES COLLECT DATA AND HAVE DOCUMENTED THAT THIS INVESTMENT IS BOTH SAVING LIVES AND THE FEDERAL HEALTHCARE SYSTEM MONEY!

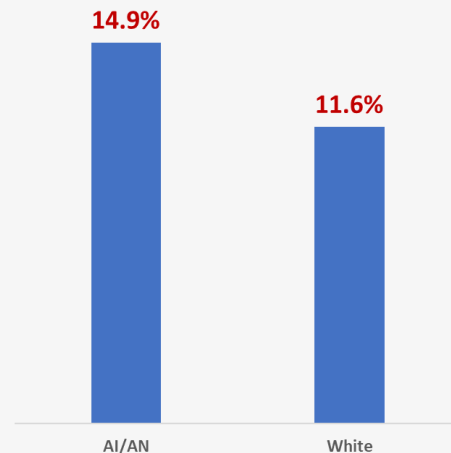

Diabetes in Florida

FY 2023 SDPI funding in Florida totaled \$486,980 for 2 Community Directed Grant Programs:

- Miccosukee Tribe of Indians of Florida
- Seminole Tribe of Florida

According to the American Diabetes Association (ADA), in 2018, approximately 2,164,009 people in Florida – 12.5 % of the population – had diagnosed diabetes, and many suffered from serious diabetes-related conditions such as heart disease, neuropathy, and eye, foot and skin complications. In addition to the human toll diabetes places on the people of Florida, it also places a large financial burden on the state's healthcare system. The staggering estimate of cost of diabetes and prediabetes in Florida was approximately \$25 billion.

Percentage of Adults in Florida with Diabetes

SDPI Impact

SDPI provides a strong return on federal investment and is saving lives in Florida. Since the beginning of SDPI, blood sugar levels have decreased, risk factors of cardiovascular disease have been reduced, diabetes-related kidney disease has been cut by more than half, and primary prevention and weight management programs for Native youth have increased. Nation-wide AI/AN diabetes prevalence decreased from **15.4%** to **14.6%** between 2013 and 2017. National data reflect the excellent outcomes in Native Nations resulting from innovative local level programs.
