

# National Indian Health Board

## Special Diabetes Program for Indians:

*Saving lives in Texas and providing a strong return on federal investment*

### History

Congress established the Special Diabetes Program for Indians (SDPI) in 1997 to address the growing epidemic of diabetes in American Indian and Alaska Native (AI/AN) Nations. By allowing Tribes to determine their own approach, the program has become the nation’s most effective federal initiative to combat diabetes and serves as a useful model both for diabetes programs nationwide and public health programs in Indian Country. SDPI is currently authorized through Fiscal Year 2023.

### SDPI Outcomes

**301**  
AI/AN DIABETES PROGRAMS IN 35 STATES

**5.5%**  
DECREASE IN PREVALENCE OF DIABETES  
Between 2013 and 2017

**15.4%**  
↓  
**14.6%**

**END STAGE RENAL DISEASE REDUCED BY 54%**  
Between 1999 and 2013- the greatest decline of any racial or ethnic group.

**\$88,000 IN SAVINGS FOR MEDICARE FOR EACH PATIENT KEPT OFF CHEMODIALYSIS**

**TRIBES COLLECT DATA AND HAVE DOCUMENTED THAT THIS INVESTMENT IS BOTH SAVING LIVES AND THE FEDERAL HEALTHCARE SYSTEM MONEY!**

### Diabetes in Texas

**FY 2023 SDPI funding in Texas totaled \$784,901 for 4 Community Directed Grant Programs**

According to the American Diabetes Association, approximately 2.69 million people in Texas – 12.4 % of the population – have diagnosed diabetes, and many suffer from serious diabetes-related conditions such as heart disease, neuropathy, and eye, foot and skin complications. An additional 7.1 million people—34 % of adults– have prediabetes. In addition to the human toll diabetes places on the people of Texas, it also places a large financial burden on the state’s healthcare system. The staggering estimate of cost of diabetes in Texas is approximately \$25.6 billion each year.

### SDPI Impact

SDPI provides a strong return on federal investment and is saving lives in Texas. Since the beginning of SDPI, blood sugar levels have decreased, risk factors of cardiovascular disease have been reduced, diabetes-related kidney disease has been cut by more than half, and primary prevention and weight management programs for Native youth have increased. Nation-wide AI/AN diabetes prevalence decreased from **15.4%** to **14.6%** between 2013 and 2017. National data reflect the excellent outcomes in Native Nations resulting from innovative local level programs.
