RE: Comments on the State of South Dakota’s 1115 Demonstration Application, “Improving Indian Health in South Dakota”

Dear Administrator Verma:

On behalf of the National Indian Health Board (NIHB) and the 573 federally recognized Tribal Nations that we serve, I am writing to submit comments to the Centers for Medicare & Medicaid Services (CMS) regarding South Dakota’s new 5-year section 1115 demonstration to “reimburse Federally Qualified Health Centers (FQHCs) in the demonstration with 100% Federal Financial Participation (FFP) for services provided to American Indians.”

The waiver proposes to create a new alternative service delivery model that will increase access to primary care services for American Indians and Alaska Natives (AI/ANs) from FQHCs and Urban Indian programs. However, the waiver does not change the FQHC system or create a new delivery or payment model that does not already exist today. All the waiver does is increase federal financial participation by allowing South Dakota to claim 100 percent FFP for services provided to AI/ANs by FQHCs and Urban Indian programs. Most importantly, nothing in the waiver requires that the saved resources be used to increase access to services for AI/ANs by building upon the service delivery capacity and breadth of services provided by Indian health facilities.

As a result, NIHB requests that CMS not approve South Dakota’s waiver. It does not promote the objectives that Congress intended when providing 100% Federal Medical Assistance Percentage (FMAP) for services received through Indian Health Service (IHS) and Tribal health facilities under section 1905(b) of the Social Security Act. The waiver is not necessary since South Dakota already operates an “alternative service delivery model”,\(^1\) through its existing structure of FQHC providers. AI/ANs can already access services at FQHCs. Approval of the waiver would not create a new service delivery model that does not exist today, or increase access to such services. The waiver only creates a new financing scheme that would allow the

\(^1\) See references to “alternative service delivery model” at: cover letter; pages 3 and 4.
State to claim 100% FFP/FMAP for services provided by non-Tribal FQHCs and shifts this cost to the federal government.

In addition, Section 1115 of the Social Security Act gives the Secretary the authority to waive provisions of the Act, not regulations. South Dakota appears to propose waiving 42 C.F.R. § 433.10(c)(2) (note that the actual Application states “C.F.R. § 4331.10(c)(2)” but this is a non-existent regulation), which is a regulation, not a statutory provision. However, assuming that the Secretary could waive a regulatory provision under Section 1115 authority, waiving 100% FMAP for services received through IHS/Tribal facilities does not extend its application to other facilities. Instead, it just eliminates it. So not only is the waiver unnecessary because it does not propose anything new, it also fails to meet the basic requirements of section 1115 of the Social Security Act and should not be approved.

It is important to acknowledge that NIHB supports the State of South Dakota continuing to work with Tribes in order for the State to claim 100% FFP/FMAP for services to eligible AI/ANs “received through” facilities of the Indian Health Service (IHS), however this should be done under the existing CMS State Health Official letter (SHO #16-002) and apply to individuals eligible for IHS services as defined at 42 C.F.R. Part 136. NIHB also supports the expansion of 100% FMAP to those urban Indian organizations that are funded under the Indian Health Care Improvement Act (IHCIA); however, not as part of this waiver.

**Congress Intended 100% FMAP to support IHS Facilities**

In 1976, Congress amended the Social Security Act to authorize IHS and Tribes to bill Medicaid, which Congress described “as a much-needed supplement to a health care program which for too long has been insufficient to provide quality health care to the American Indians.” ² Section 1905(b) of the Act requires the federal government to match state expenditures at the FMAP rate, which is 100% for state expenditures on behalf of “IHS eligible” Medicaid beneficiaries for covered services “received through” an IHS facility whether operated by the IHS or by a Tribe or Tribal organization (as defined in section 4 of the Indian Health Care Improvement Act).³

Congress authorized 1905(b) to supplement inadequate IHS appropriations as part of the federal trust responsibility, and at the same time recognized that “it would be unfair and inequitable to burden a State Medicaid program with costs which normally would have been borne by the Indian Health Service.”⁴ This ensured that states would not have to bear any such costs, by providing 100% FMAP for services “received through” IHS and Tribal facilities. Section 1905(b) allows Congress to provide critical resources to the Indian health system while not shifting this responsibility to the states.

³ Sec. 1905(b) of SSA; 42 U.S.C. § 1396d(b).
⁴ Senate Report 94-133, Indian Health Care Improvement Act.
At the same time, Congress stipulated that the Medicaid funding received by IHS and paid for entirely by the United States under 1905(b) is to be utilized to make facility improvements necessary to achieve compliance with Medicaid standards as prescribed in State Medicaid Plans. Initially, the Act required that Medicaid and Medicare payments be placed into a special fund for improvements of IHS facilities [§ 401(c)(1)]. Subsequent amendments to the IHCIA now allow Tribal health programs and urban Indian organizations to directly bill Medicaid and eliminate the use of the special fund. However the requirement that funds be used to maintain facilities and compliance with Medicaid standards—among expanded uses of the reimbursements from improvements to reduce health deficiencies—still exists in current law. The IHCIA further requires the retention of the reimbursements received from Medicare, Medicaid or SCHIP shall be credited to the IHS operating unit that generated the resources and be used for such purposes of maintaining compliance in the federal programs described above.5

CMS’s long-standing interpretation of section 1905(b) is that 100 percent FMAP is available for amounts expended for services under the following circumstances:

(1) The service must be furnished to a Medicaid-eligible AI/AN;
(2) The service must be a “facility service;
(3) The service must be furnished by an IHS/Tribal facility or by its contractual agent as part of the facility’s services; and
(4) The IHS/Tribal facility must maintain responsibility for the provision of the service and must bill the state Medicaid program directly for the service.

CMS’s recent re-interpretation of 1905(b) permits a wider scope of services for states to claim 100% FFP/FMAP. However, services must still be linked to an IHS/Tribal facility.6 Under CMS’s new interpretation, the scope of services that a state can claim 100% FFP/FMAP must continue to be “received through” an IHS/Tribal facility, require a referral from the IHS provider, and that the IHS facility must enter into a written care coordination agreement with the non-Tribal provider. The purpose of CMS’s revised policy interpretation of 1905(b) is to enable IHS facilities to expand the scope of services they are able to offer to their AI/AN patients while ensuring coordination of care in accordance with best medical practice standards.

It was the intent of Congress to provide 100% FMAP so as not to burden the states with the federal responsibility to pay for the cost of care “received through” IHS facilities, and to provide additional resources for making improvements in IHS facilities in order to achieve compliance with the applicable conditions and requirements of Medicaid. As a result, the Tribal 100 percent FMAP rule must only be made available for services “received through” the Indian health system. Only in this way can CMS ensure that federal funds flowing into the Indian health system will achieve and maintain compliance with the Medicaid conditions of participation as Congress intended. For this reason, NIHB strongly objects to the State’s proposal to extend the Tribal 100 percent FMAP rule for Indian health facilities to non-IHS provider types.

The South Dakota demonstration waiver would provide significant additional Medicaid funds to the State with no guarantee that these resources be used to support the Indian health system or address facility deficiencies, as Congress intended. The waiver states that it is intended to increase access to services for Indians that do not have convenient access to IHS providers in the State. But the waiver does not actually provide additional access to providers, or additional resources to Indian health providers. AI/ANs already have access to FQHCs and Urban Indian programs in the State. The waiver does not increase their access to FQHC or Urban Indian clinics. Nor does the waiver provide any new resources for FQHCs or Urban Indians clinics to serve AI/ANs. The waiver would appear to reimburse FQHCs under the State's standard cost-based reimbursement methodology. There is nothing in the waiver that states that any additional resources would be provided for additional care to AI/ANs. Billing by Urban Indian clinics is not even mentioned.

All of the cost savings in the waiver would flow directly to the State, and there is no assurance that any resources would flow back to the Indian health system, or make any improvements in the facilities of the IHS in order to achieve compliance with the applicable conditions and requirements of Medicaid, as Congress intended when it amended the Social Security Act sections 1905(b) and 1911.

**Budget Neutrality**

CMS requires states to demonstrate that projects authorized under section 1115 of the SSA are budget neutral. A budget neutral demonstration project requires that Medicaid costs to the federal government must not be greater than what the federal government’s Medicaid costs would likely have been absent the demonstration. The South Dakota demonstration waiver explains that Medicaid expenditures for the demonstration population would be the same if the demonstration did not exist. South Dakota appears to justify this by claiming that these costs are the responsibility of the federal government under the federal trust responsibility citing the IHCIA’s Declaration of National Indian Health Policy (25 U.S.C. § 1602) as the authorization for 1905(b).7

While the NIHB does not disagree with South Dakota’s foundational principle that the federal government has the duty and obligation to fund the health needs of AI/AN people, we note that the State conflates the Declaration with the authorization for 100% FMAP. The IHCIA is not the authorizing statute for 100% FMAP, it is the Social Security Act. Because of this, the requirements of the SSA, which authorizes 100% FMAP would still require that covered services must be “received through” an IHS facility.

South Dakota further reasons that there would not be increased federal expenditures than what would otherwise have been spent, since the federal government would be responsible under the “federal trust doctrine” and 1905(b) to pay all of the costs for Medicaid-eligible services at the FQHC facilities. South Dakota’s proposed demonstration would effectively allow 100%

FFP/FMAP for services rendered by FQHC providers eligible under the demonstration – with no requirement that covered services be “received through” IHS facilities. This will increase the costs of Medicaid services, which would no longer be linked to a requirement that they be “received through” IHS facilities, and result in increased Medicaid expenditures to the federal government.

When Congress authorized the IHS and Tribal facilities to participate in Medicaid as a new class of provider, it did not negate a state’s existing obligation to provide Medicaid services to all eligible individuals, including AI/ANs as citizens of a state. Prior to the enactment of 1905(b) states paid the state share of Medicaid for all AI/ANs, whether served by IHS or non-Tribal facilities. The law did not alter that, and instead provided 100% FMAP to offset the cost to the State of authorizing a new class of providers to bill Medicaid, and help provide additional resources to the chronically underfunded IHS. The change outlined in this demonstration would contradict this principle.

Conclusion

NIHB commends the State for identifying health disparities experienced in Indian country in the State of South Dakota and its commitment to exploring innovative ways of addressing those disparities. Unfortunately, the proposed waiver will not achieve those goals. As a result, we urge CMS not to approve this demonstration waiver since it will simply allow the state to claim additional cost savings with no direct benefit back to the Indian health system, and does not meet the budget neutrality requirements for 1115 waivers. In fact, this waiver will result in additional Medicaid expenditures to the federal government by allowing all Medicaid services provided to AI/AN by non-Tribal FQHCs to be claimed at 100% FFP/FMAP, and not limit the number of Medicaid services by applying the “receive through” IHS facilities requirement that exists in statute and in the SHO letter.

We hope that our comments and recommendations are not construed as an unwillingness to work with the state to improve healthcare for AI/ANs. Our comments are intended to uphold the federal trust responsibility and to ensure that resources associated with 100% FMAP continue to be invested in and improve the Indian health system.
